### DETAILED ACTION

1. Applicant's election with traverse of the Group IV invention in Applicant's response received 12/19/03 is acknowledged. The traversal is on the ground(s) that the inventions are interrelated and there is no serious burden. This is not found persuasive because Applicant has not stated that the claimed inventions are not patentably distinct from one another; the mere statement that there is some inter-relationship is not sufficient. The fact that steps may be used that are similar, the end result, sizing is not required by the other method Group, which makes it a patentably distinct invention.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 16, 18-24, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sarkar et al (5,501,770).

Sarkar et al discloses a process for making paper in which a cellulytic enzyme is added to papermaking sludge and recycled to be incorporated with the papermaking stock. The sludge normally contains such substances as rosin and starch, which are well known sizing agents in the art. It is obvious that one would expect improved sizing since the same papermaking sludge is treated with the same cellulytic enzyme.

3. Claims 14 and 25 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.
